

## Great Wall

### Great Wall V200

### Great wall V200

The Unichip fitted to the great wall makes an even greater impact!

From 81rwkw to 95.2rwkw still seeing an increase of 17.5%!

The “turbo lag” as being a issue, and being a major push for the Unichip fitment.

We can see on the dyno graph that the torque increased from 70nm to 130nm at 1000rpm!
